Did **you** know...

...that you will spend an average of **25,480 hours of your life*** in the bathroom - that's more time than some of us spend in our kitchens!

*Based on a person spending 1 hour per day and reaching the age of 70 years.

Whether it's a **cloakroom, en suite or family bathroom**, we can help create a bespoke look **just for you**.

If we do spend that much of our time in our bathrooms then **creating a space** that encapsulates **our own individual needs and styles** would enhance the experience.

Create your own space

There are **three fantastic sanitaryware collections** to choose from, each with their own unique designs and concepts to suit your needs and budget.

rina

An exciting collection of world class affordable products designed and developed with our customers' needs in mind.

Suites priced from £350

fresssh
Bathrooms

A great range of top quality, well designed bathroom products that are competitively priced yet provide exceptional value.

Suites* priced from £199 - £495

JIKA
part of Reca group

It offers a comprehensive collection of design led sanitaryware and bathroom furniture, which is appealing to both the eye and budget.

Suites* priced from £337 - £471

*Includes standard close coupled pan, cistern, seat, basin and pedestal.

Whether its a **contemporary twist on a traditional style**, soft curvatures to strong angles or simply a bathroom built for comfort, we can help you achieve **your very own version of perfect**.

Over the next few pages, we've taken the liberty of breaking down our luxury range Rina, into styles and shapes to **help you achieve your bespoke look**.

Glossary

Asymmetrical Basins

When looked at from above the 'offset basin' does not look symmetrical. The bowl of the washbasin is set to one side, either to the left or to the right, of centre. This arrangement allows the use of the remaining area, on the opposite side to the bowl, as a shelf for temporary storage of personal items. An offset corner basin goes a little further since it makes the basin more ergonomic and easier to use.

Back-to-Wall Pan

The cistern is separate from the pan and concealed behind a wall or inside fitted furniture. This can look very streamlined and can be an effective and economical use of space in a small bathroom.

Bath Filler Tap

Similar to a Monobloc mixer tap, a Bath Filler mixes water from hot and cold supplies. The difference being that Bath fillers come with 2 tap holes only.

Bath & Shower Mixer

A single body fitting, requiring two tap holes for hot and cold water supplies, which mixes within the body of the fitting.

Cistern

The ceramic or plastic tank which contains the water which flushes the toilet. The cistern may be close coupled, concealed, low level or high level.

Close Coupled Toilet

The underside of the cistern rests directly on the back of the pan creating a compact unit with low overall height. Some contemporary designs appear almost like a single item. A close coupled toilet is the most popular toilet used in our homes.

Combination Boilers

These are high pressure systems and are usually set to operate between 0.8 to 1.5 bar, minimum and maximum pressure can be confirmed with the manufacturer however most boilers have a gauge to show what pressure it is operating at. Combination boilers have an integrated pump so if the water pressure is too low for your required application, adding another pump can damage the boilers.

Comfort Height Pan

The comfort height pan is ergonomically designed with additional height on the pan to provide increased comfort for users.

Countertop Basins

This basin is the simplest form of washbasin since it is designed to simply sit on top of a counter, on furniture or on a shelf. The basin has a central waste outlet and sometimes comes with no overflow. Taps are either fitted to the basin or are designed to be freestanding on the furniture. Lay-on or vessel basins can be described as "minimalist" and ultra-modern.

Dual Flush

New toilets in the UK are regulated to deliver less than 6 litres of water each time they flush. A dual flush toilet is a toilet which can flush a reduced volume of water (usually between 3 and 4 litres). This capability can produce a large water saving over time.

Gravity fed system

This is usually a tank in the loft space or inside an airing cupboard. A basic guide to establish how much pressure it will deliver is how high the tank is above the tap or shower. If the tank is two metres above the level of the tap or shower, the water pressure will be 0.2 bar. If it is five metres, the water pressure will be 1.5 bar. Generally this type of system is low pressure, however you can increase the pressure by installing a pump. It is recommended to seek advice from your tradesman or one of our specialist staff members before choosing your pump as these vary in performance.

Monobloc Mixer Tap

A single body fitting, requiring only one tap hole. Mixes water from two supplies normally hot and cold at equal water pressures. Available in a basin or bidet fitting.

Multi Outlet

A multi outlet toilet is the term given to a toilet which can be connected and used in all drain configurations. The horizontal outlet from the toilet is configured so that it can be installed, with appropriate plastic connectors, to 'S trap', 'P' trap', and 'bottom outlet' situations.

Pop Up Waste

Often supplied with Monobloc mixers, negating a need for an untidy plug and chain. An operating rod is usually concealed behind the mixer to raise and lower plug. Also available for use in a bath.

Sealed / Unvented Systems

These are modern systems, if you have a hot water tank but you don't have a cold water tank (cistern) in your loft or garage, this is an unvented high pressure system. They are quite uncommon as they are more expensive, however they can usually deliver around 3.0 bar of water pressure.

Semi-Recessed Basin

A fitted basin which is semi-recessed into a furniture unit. May be more comfortable to bend over than a fully recessed basin.

Short Projection

Some sanitaryware is designed especially for use in small bathrooms. The product is designed to save as much space as possible by not projecting as far as normal into the room. A short projection washbasin is very narrow from front to back. Likewise the short projection toilet is considerably shorter than normal from the wall to the front rim.

Shower Bath

Provides conventional bathing with additional facility for over bath showering. Available in left or right hand options depending on which end of the bath is to be used for showering.

Soft Closing Mechanism

This is the term given to toilet seats and furniture doors/drawers having a special hinge or runner mechanism which slows the movement of the seat/door/drawer as it closes. The mechanism is hidden within the hinge or runner. The seat and furniture will not close with a sudden thud but will gently fall into place, unaided.

Understanding the Water Pressure System in your home

There are a few different types of water systems in homes in the UK, we can usually make some assumptions about the sort of water pressure each will give.

Wall Hung Toilet

The cistern is separate from the pan and concealed behind a wall or inside fitted furniture. The pan juts out from the wall, above the floor, on brackets. Basins and bidet can also be wall hung. This makes for a clean, minimal look, as well as for easy cleaning.
