Teddington CombiSave

CombiSave..... even brand new A rated boilers are not as efficient as you think and every time you turn on the tap you are wasting water, gas, time and money.

Independent tests show that as soon as you switch on the boiler, the first 10 litres used in the process of heating water are wasted.

CombiSave is a fit and forget thermostatically operated valve that can be fitted to any make and model of existing wall hung combi boilers.

By controlling the flow of water during the initial firing process, CombiSave accelerates the heating of water and reduces the amount of fuel needed in the process. CombiSave can even be fitted to older models making your home more energy efficient.

Save water - up to 55,000 litres per year saving up to £140 per year.

Save gas - the time reduced heating water will use less gas saving up to £100 per year.

Save money - your bills will reduce once CombiSave is fitted.

For more details visit www.combisave.co.uk
